Comments: You cannot allow mining to take place in or near a water source, especially a major water source. The environmental impacts would.be insurmountable. In America, we have the right to clean water, as do the animals who live here too. The impacts from the abuse we have inflicted upon our planet is showing everywhere. The west is burning down. The earth is hotter than it has ever been. We aren't getting the snow and rain we need. Hurricanes are worse. Tornados are worse. Air quality is unhealthy. Is gold worth it? What good wi it do the earth? What good will it do the American people, other than the select few who hope to find some? Please, save the Salmon River. Save it for me. Save it for you. Save it for Americans. Save it for the fish, birds, mammals great and small who depend upon the ecosystem it provides. Stop abusing the earth out of greed.
