Comments: I believe our National forests are a huge asset to all of us humans, animals and birds. We all benefit from quiet spaces. Therefore I would like to see these spaces protected from noise, logging, some grazing.

I would like to see much more limits to ORVs as their noise impacts humans and the wild animals and birds. They also tear up the forests leaving ditches.

I would like to see less logging. Trees provide habitat for birds and animals. Scientific studies show beetle killed trees do not contribute to forest fires. The roads for logging contribute to problems like more traffic through the forest. Live trees sequester carbon and slow down warming of the planet.

I believe grazing at high altitudes in the forest should be reduced. The cattle destroy habitat for wild animals and pollute our water supply. I experienced cattle grazing and defecating in some of the reservoirs that bring us our water. Looked like a health issue.

Humans and wildlife all need quiet healthy forests.

Thank you.
