Comments: Leave Wilderness as Wilderness,I am very dissappointed in the display and information I received. My major concern isa) any reduction in wilderness designation will negatively effect water quality, wildlife habitat, wildlife survival and sustainability of our resourcesb) I want to see, and am shocked NOT to see scientific reviews and scientific designation of critical and desirable habitats & focal species. How people "feel" without considering data and data on climate, management practices considering climate change effects is worthless for future survival.b) What are the Key ecological principles for any changes in this proposal. It appears collaboration of appointed parties has resulted in disregard for wilderness and species survival.
