

Elaine Korhman  
U.S. Forest Service

Please do not designate Zuni Mountain Plot D2 5K6 as a wilderness area. It has plants that are common to the rest of the Zuni Mountains and Cibola National Forest. There are also species of mammals there that are common to the rest of the forest. There are also many other areas in the Zuni Mountains which contain Spruce trees.

This area has been inhabited by humans. There is evidence of human activity such as logging and ranching.
