

CRAGGY VEGETATION MANAGEMENT PROJECT COMMENT FORM

Please provide your comments below.

It's been @60 yrs since Haystack Fire watershed modeling is just that ~~a~~ model. It is in all reality under estimating land recovery. It is built on MAMMOE assumptions. Regardless if we do not treat due to "modeling" estimates of watershed condition, & it burns hot again, then the modeling is a mute point.

The area needs to be treated to prevent another high intensity fire. Treat almost all acres w/in project bndry.

Include ALL Ponderosa Pine Plantations for treatment. They are at risk to bark beetle caused mortality which will add to fuel loading over time. Approve under NEPA all treatments that the land needs. That is environmental decisions. How to pay for things is an administrative decision(s) beyond NEPA. You can't do the work if it is not approved in NEPA.
