Subject: Highway 89 Project

Dave,

Thank you for the opportunity to comment on the Highway 89 project, it was apparent during a public field tour that the forest is long overdue for restorative management activities. It is imperative that a signed NEPA analysis be completed to allow for management activities in overstocked plantations, natural stands and along the highway corridors. The area is high use along the McCloud River for the forest industry, recreation and scenic values - Forest Health is on a decline in the stands. With excessive fuel loading threatening stand changing catastrophic fires and a non-defendable infrastructure the forest needs to implement this project immediately.

Sincerely,

Ryan Hadley
