cgplanrevision@fs.fed.us

RECEIVED
FEB 23 2018

My primary concerns about the CGNF revision plan are:

- ☒ Lack of habitat connectivity for wildlife**
- ☒ Too few identified Species of Conservation Concern**
- ☒ Effect on Montana's 7 billion dollar outdoor industry
- ☒ Plans for resource extraction (ie mining, timber harvest)
- ☐ Loss of opportunity for solitude

MESSAGE: To Whom it may concern,

I have lived in the Rocky mountains all my life, and
I have been passionate about Montana wilderness all my
life. I am very concerned that the Custer Gallatin National
does not encompass enough crucial wild life habitat. These wildlife
corridors allow the movement of all of my favorite species.
It is not just a local Montana issue but one that extends
to Canada. We cannot fragment this land. If we do
we will see the extinction of grizzly bears, grey wolves,
mountain lions and wolverines in my generation.

Privacy statement: Personal information will aid the Forest Service in processing your comments. This information will not be used for any other purpose.

This wilderness needs full protection for Montanans, Americans, Canadians and everyone all over the world that doesn't have a voice or a say in this local issue but would stand up for wilderness conservation. I support 100% a unified unbroken Gallatin Range wilderness of 547,641 acres, including both the national park and national forest section of this magnificent mountain domain. Thank you for your time.

Sincerely,
Sarah Fleeman
