Mainly in adjacent stream
 Non-commercial
 thinning may be appropriate in some thickets
 Subjective evaluation of area:
 Dense, spindly area feels "horrifying." The creek was relaxing, and beautiful
 If you commercial operations that threaten creek & OG habitat

Roadless area Never logged Plantation Many old growth logs and snags
 Old growth/mature forest:

Average tree size in "dbh":
 Examples of large tree diameter: 22" PP, 16" GF Adjacent: 51.5" GF
 # of old growth trees per acre: Many old growth trees east of unit between unit & stream

Previously logged approx. age of trees

Describe marking to cut:
 Former logging sign (skid trails, stumps, lack of regen. dense overstocked spindly thickets) describe:
 Very thick young GF w same ES

Mixed conifer, specify species and number in descending order of prevalence: Ponderosa Pine
 Juniper Doug Fir Western Larch Grand Fir Lodgepole Pine Engleman
 Spruce Subalpine Fir Yew Mt. Mahogany Aspen Willow Alder
 Shasta Red Fir Sugar Pine White Pine Incense Cedar other:

Tree seedlings (species, quantity):
 Quality and type of canopy closure, %: 20% mature ES, PP, & GF / 60% young GF

Historically natural mixed-conifer site: old growth mixed-conifer, fire scars, north slope, moist area, high elevation, describe: Same fire scars on down logs, really moist area with adjacent creek to moist plants
 % of defoliation - species and age of trees affected: 35% ES mature

Species evident using area for habitat/forage (scat, tracks, sightings, calls, foraging/nesting, roosts, dens, burrows, beds, hives, etc.): Castipated elk scat, Deer/Elk trails, woodpecker foraging

Riparian area in or adjacent to area/unit(s) (springs, seeps, drainage headwaters, seasonal runoffs, creeks, rivers, lakes, ponds) describe: You can hear the creek from the unit

Riparian buffers? Adjacent steep slopes? Needs at least 150 feet from creek
 Unusual plants?

Plant community types: Pine grass, Queen's c up, snowberry, prince's pine

Soil type, quality, compaction level(s): Moderately compact, darkish brown loam
 Typical plants: Pathfinder, starry flowered sedum, wild strawberry, bracken, gooseberry, meadow rue, bed straw, Hell bore

Photo guidelines: unusual plants/animals, wildlife, old growth canopy-dependent species evidence, nest holes, foraging, burrows, canopy in green sales, riparian areas without buffers, relative severity of burn if fire salvage sale, old growth grove, cattle damage, cumulative impacts of former logging, healthy mixed-conifer, etc.. Minimize number of photos. Draw map of unit & show differences in different areas e.g. Location of old growth, riparian areas, significant wildlife sightings, sensitive plant & exotic weed locations. Identify camera used.

Photo #s & descriptions: Karen's Canon 9:47 Survey heading & map

- 10:15-10:16 unidentified plant w/ single stem of tiny 5 petaled white flowers w/ long stamens
- 10:17 Queen's Cup Beard Lily (10:21) upstream & downstream views of substantial creek in sale unit
- 10:34 - an OG ES snag & log by creek
- 10:35 - healthy, tall mature to OG ES, DF overstory w/ healthy GF midstory
- 10:41 - A very large OG ES log (10:45) healthy tall OG & m DF & GF overstory (10:46) wild Rose
- 10:50 - typical view outside RHCA - more cut-over w/ small tree density, more open overstory
- 10:53 - Twinflower, Big leaf huckleberry, & Prince's Pine - moist PA6
- 10:56 - Mt. Ash (11:04) an OG GF snag by rd 51 (11:06) Lost Creek unit 55 boundary sign - for past or present sale?
- 11:01 - understory typical view w/ only NET small tree density, (11:13) an OG ES stump w/ clipboard for scale
- 11:11 - This is not a plantation - mature green GF, ES, & LP
- 11:16 - healthy LP, WL, & ES younger-mature overstory (11:26) tight spacing of m DFs & WL in plantation
- 11:30 - a clearing in the plantation area aff rd 51 w/ healthier trees except for some browning needles in WL
- 11:33 - Mt. Lady's Slipper (11:46) new w/ blue boundary flagging
- 11:55 - Cobb's foot flower (12:00) Pint sale unit 72 boundary sign
- 12:03 - 2 views of an Amanita mushroom (12:04) a W. Larch Bolete (12:13)
- 12:14 Carpenter ants & their sandcast (12:16) Arnica flowers (12:21) Valerian flowers
- 12:22 & 12:23 - the unided big fern - patterns (12:24-12:27) Beauty shots of the creek under alders

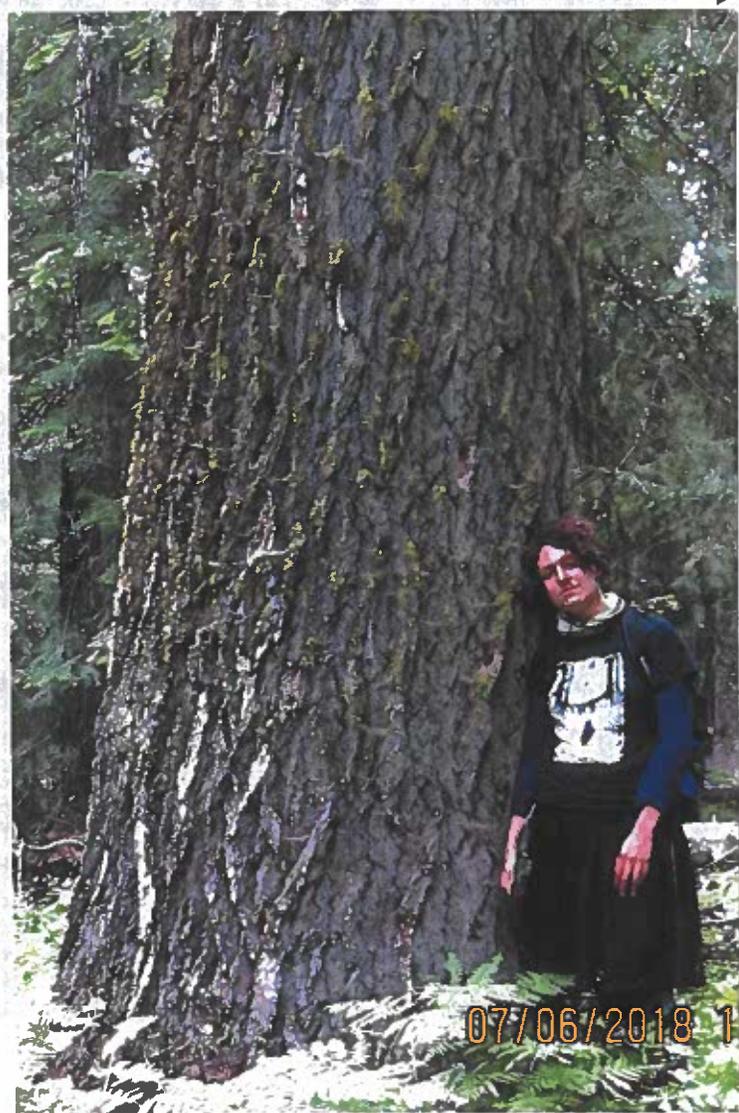

DATE 7/16/18
 NTL FOREST Umatilla
 DISTRICT Walla Walla
 PROJECT Glass
 UNIT 13 N^s of 6413, E of 400 W of 450
 SURVEYOR'S NAME Karen NE of 6236
 Relic

Recommendation:
 * DROP all old growth forest - with old growth Grandfir/Englemann spruce/Douglasfir in the NE corner of the sale unit & West end - We don't want just the large trees left, but all old growth forest areas completely dropped from sale units, as logging these is contrary to the stated purpose and need of the Glass Project.

Evidence of historically natural mixed conifer: Very large old growth Grandfirs with large old growth Englemann spruce & Douglas fir & many very large old growth Grandfir logs & snags.
 Relic with a 54.5" dbh old growth Grandfir

17:03 Relic w/a 64" dbh old growth Grandfir

bn Spring

Subjective evaluation:

At some point the Forest Service needs to let younger-mature trees
 (e.g. the W. Tarch below) grow up to be mature and then old growth
 to replace all the mature and old growth forest lost to over-logging.
 That's the really important historical range of variation, and should
 be a commitment, not an idle promise.

9:37 Healthy Western Tarch canopy

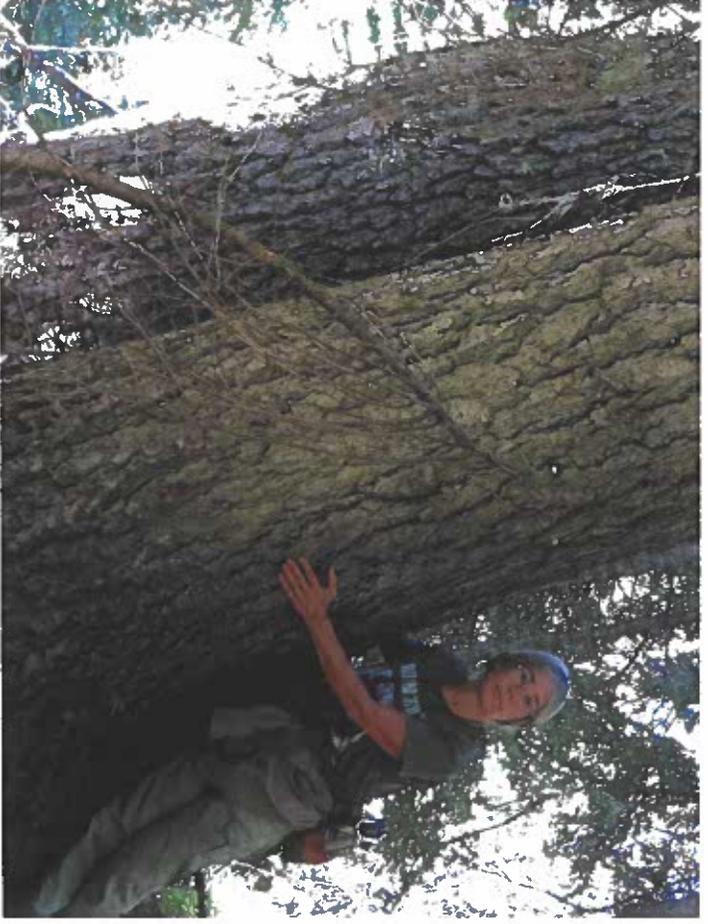

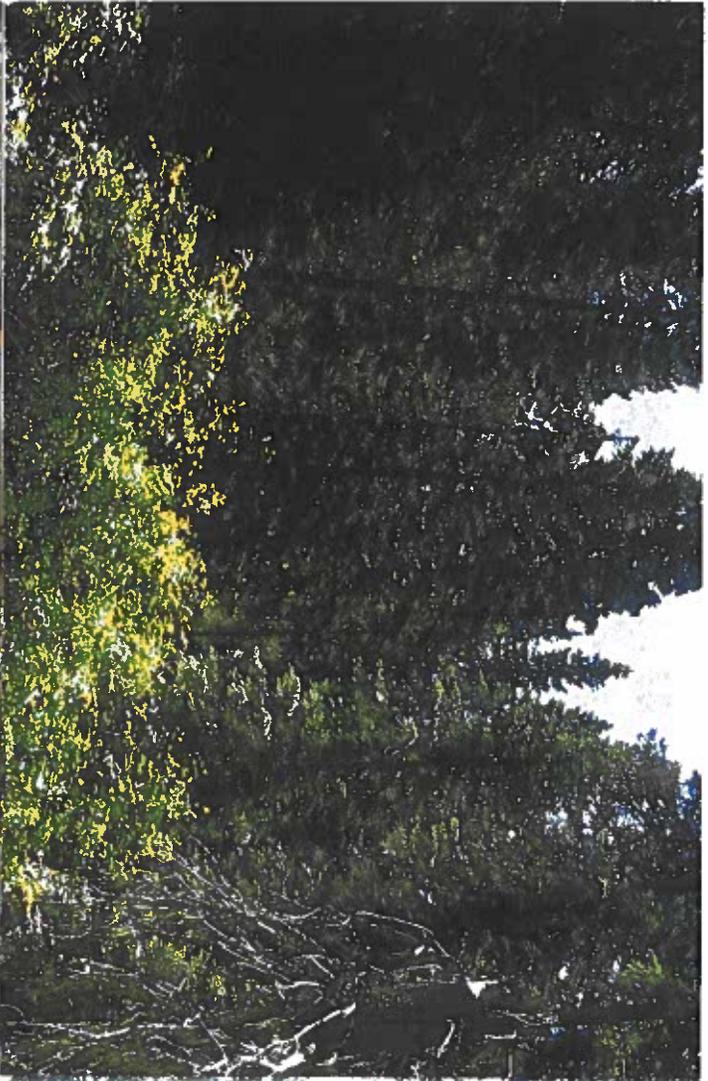

Overall sale unit description:

Based on GPS and the coarse-scale (inadequate) map,
 I was in the sale unit except for a little South at
 the end. This means over half of it is not a stressed
 plantation, but is old growth most mixed conifer
 Grand fir / Englemann spruce / Western Tarch / Douglas fir
 with lots of old growth snags and logs and a pair of
 Pileated woodpeckers.

 E of rd 408, N of 6413 rd,
 just NW of junction of 1643 & 6236
 Walla Walla District
 Lemathia National Forest

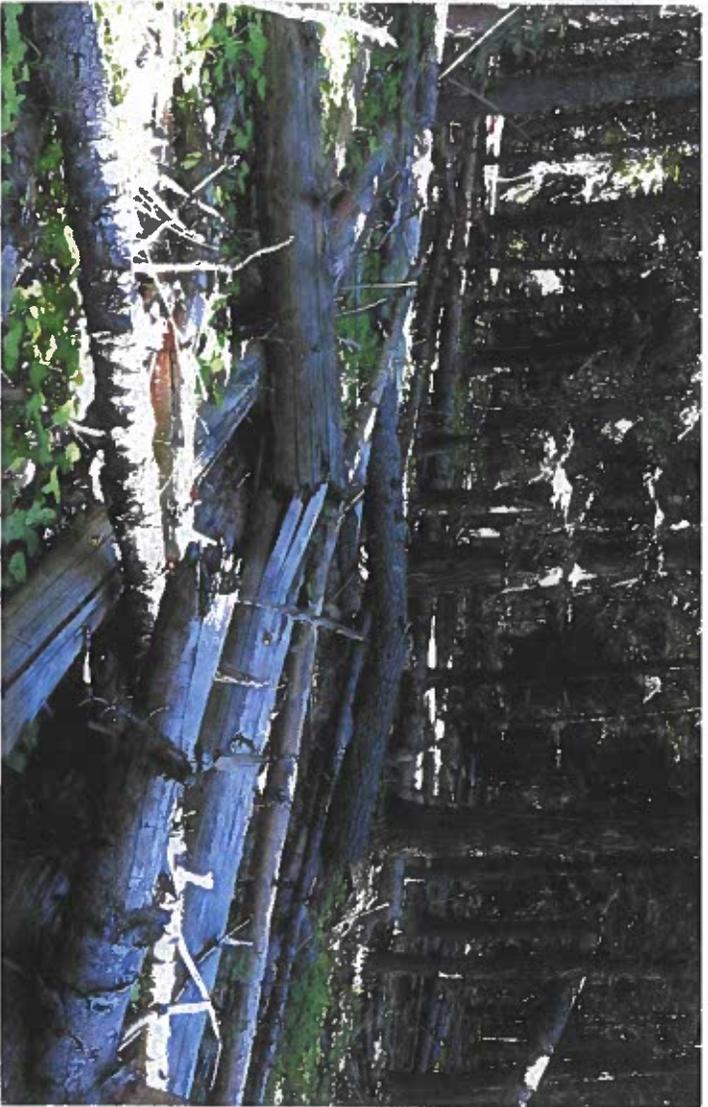

17:12 Pileated woodpecker foraging in a large old growth Grand fir snag

(*) DROP IT!

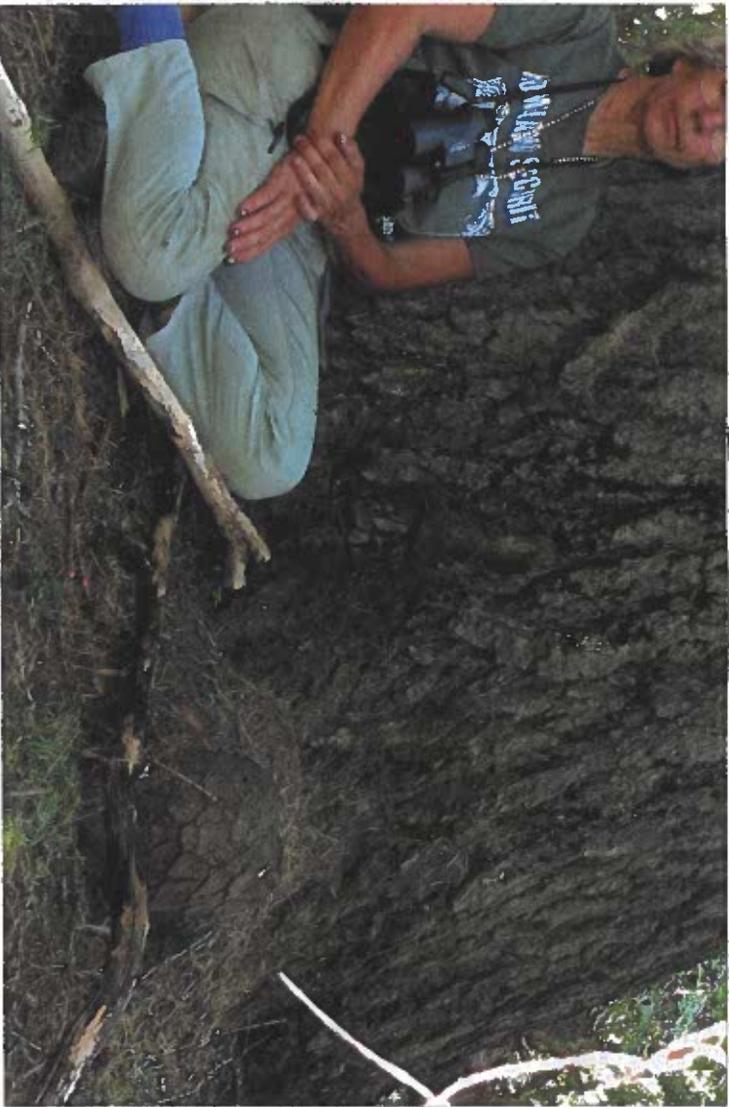

Glass See 12 sale unit recommendation: This is high quality old growth mixed conifer habitat & active Pileated woodpecker habitat.

Regardless of whether this was logged before, it's now nice old growth structure habitat, & should be protected as such.

- 17 live old growth Grand fir, 3 live OG Western larch,
- 1 old growth live Douglas fir, 2 OG live Engelmann spruce,
- 1 old growth snags: 2 Grand fir, 1 Engelmann spruce,
- 8 1 Western larch, & 6 Grand fir logs.

Glass, Section 9 S. of 6413 rd, W. of Buzzard Creek, E of 15 rd, 9/9/18

Riparian area description next to sale unit:

It looks like this should be a perennial creek, though the section is currently dry - broad channel, well-defined with small to large cobbles, some large wood, alders, successfully holding back sediment, minimal alder, topographic and conifer shading, with Swamp gooseberry and also with: big unidentifed ferns, Coltsfoot, Thimbleb

11:04 a looking upstream along Buzzard Creek below the sale unit, with alders & big ferns, etc. covering the stream channel w/ ferns, 11:43 a Buzzard Creek channel pool w/ down wood, large cobbles. 11:04 v looking downstream below the sale unit w/ ferns, etc

11:02 → an elk trail leading from Buzzard Creek into the
91333 or looking upstream, Buzzard Creek sale unit

Glass, Section 8, S of 6413, W of Buzzard Creek, E of 15

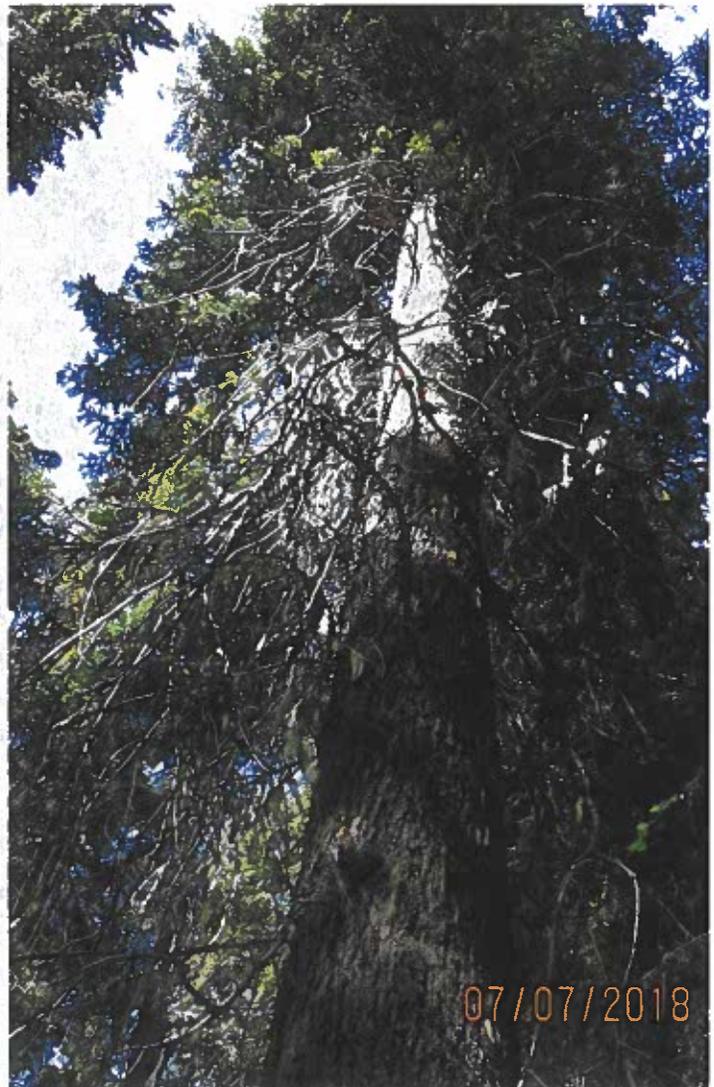

→ an elk wallow in the sale unit area
