Your Background and Interest in the GMUG:

Lived on edge of National forest for 25 years

Issue #1:

I am a fisherwoman and it is important to me ~~and~~ Please close any loopholes that would allow mineral exploration or extraction that would directly have a negative effect on fish and the ecology, water quality, and forest and streams in general

Issue #2:

Wildlife. More specific and conservative ~~management~~ management needs to be implemented to ensure the health of the forest. Please listen to and use scientific evidence to base your decisions on. Implement and enforce plans.

Issue #3:

Climate Change must be incorporated as a higher priority in the revised GMUG forest plan. The weather is becoming more unstable and the forest health is becoming compromised. Please use science and add more detail to the GMUG plan.
