Warm Lake is a lovely, peaceful area but the proposed Midas Gold project is going to change all this. For the next 20+ years and very possibly beyond, both the residents and environment of Warm Lake are going to face the negative consequences of this huge project. It is imperative that Midas Gold does every thing within their power to mitigate the negative impact of their project on the area.

Midas Gold is going to bring an excess of trucks and people, as well as noise and disruption, to Warm Lake. They must do everything they can to lessen the disruption to the area and impact on the environment.

1. Midas Gold should require, not encourage, the use of their buses.
2. They also have to develop pull-outs on the Warm Lake Highway, so trucks can pull over and let passenger vehicles pass.
3. Midas Gold needs to require the use of trucks without air brakes.
4. Limit the hours of traffic.
5. Reduce the number of car/truck trips that pass Warm Lake and go up the Warm Lake summit.
6. Midas Gold must build campgrounds on private property to accommodate workers and their families, since Warm Lake campgrounds and campable areas are already full especially on weekends.

Thank you for your consideration

Eliza Kaplan
