---

Mr. Lannom,

First off, let me say I am a mining official retired in Idaho and Vice President of Sawtooth Interpretive and Historical Assn; but my comments are mine only. The Forest Service and State of Idaho need to do more to educate the public on water use, agricultural use and mining that affect every Idahoan from the table to the grocery store. There is no concept of how the mining industry plays in and I would like to see PSAs on this thru National and International Mining Institutions.

You have an issue brewing but you must educate or find those who can educate and speak. I believe there is room to advance new mining ventures which bring huge jobs and economies to the state while balancing the negative agendas to stop the very industry that supports their families and businesses, infrastructure, security ,etc.

I'm pleased to support the mining industry and the preservation of rivers as every vehicle destined to a weekend mountain retreat presents a threat to an accident that pollutes the rivers and should be discussed. Not to mention gas tanker trucks travelling the roads next to rivers and the threat the recreation demand incurs. It's much greater than any mining operation.

Let's get public awareness out front...offense, not defense.

Stewart

The Stibnite Gold Project, as submitted to the US Forest Service in Midas Gold Idaho's Plan of Restoration and Operations, is good for Idaho's people, environment and economy. I urge your thorough and timely review and ask for your consideration of the project, with emphasis on the following:

- After 100 years of mining, most of which took place long before environmental standards were established that are in place today, the Stibnite mining district needs environmental repair and restoration.
- There is no other alternative to restore the site. The proposed Stibnite Gold Project is an opportunity for a private company to invest in restoring public lands, with the guidance of state and federal agencies. No action is not an acceptable option.
- The Stibnite Gold Project will re-establish fish migration for the first time since the 1930s, eliminate sediment washing down Blowout Creek, and remove reprocess and safely store historical tailings and waste rock are examples of the environmental benefits provided by the Stibnite Gold Project.
- Restoring the natural flow of the East Fork of the South Fork of the Salmon River, repairing impacted waterways and adding critical riparian habitat will have a positive impact on water quality, fish and wildlife upstream and downstream.
- After extensive alternative analyses and drawing on local community and public input, the project appropriately identifies Burntlog Road as the best access road to provide safe transportation to site, avoiding travel adjacent to fish-bearing waterways.
- Midas Gold Idaho's plan to bus 90 percent of the workforce to site goes above and beyond to promote safe travel, limit noise and safety

concerns, and reduce greenhouse gas emissions.

- Building reclamation into the mine plan concurrently with operations protects public lands and is a commendable investment in environmental stewardship and sustainability practices.
- As is already established by federal and state land management agencies' rules and regulations, the project will be fully bonded for clean up before mining begins. I encourage the U.S. Forest Service to work with the company to set out a plan for bonding and mitigation and to communicate that plan to the public.
- The positive economic impact to rural communities in Idaho should be at the forefront of the review and development of the Environmental Impact Statement.
- The project will be an important source of state, local, and federal tax revenues, estimated in the 2014 Pre-Feasibility Study to be \$329 million in federal corporate income taxes and \$86 million in State corporate income and mine license taxes
- The project would be a U.S. source of antimony is critical to alleviate foreign dependence on a mineral that is essential to many military defense, consumer safety and energy products.

Midas Gold Idaho wants to invest \$1 billion in our state, bring hundreds of jobs to rural Idaho and improve Idaho's public lands. This is the type of project our state needs. I strongly encourage the U.S. Forest Service and cooperating federal and state agencies to proceed with the Plan of Restoration and Operations as the preferred alternative moving forward.

Sincerely,

W. Stewart Wilder
