

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Leonard Neering

Clifton, NJ 07013"

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Beth Kessinger

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Christina Castle-Rey

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

John Bertaina

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

David Melegari

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

David M Lipman

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Henri Henault

Edmonton, T5G 1V2"

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Harriet Kritselis

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Fran Pletschet

Sun City West, AZ 85375"

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Sandra Christopher

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Ella Robson

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Randy Harrison

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Pat Blackwell-Marchant

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Valeri Fornagiel

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Don Kelley

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

terry holing

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

John Moon

Bessie L Goins

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Bessie Goins

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Kimberly Mullins

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Helene Jacobson

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Mary Benshoof

Chicago, IL 60656"

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Carrie Darling

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

e cook

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Dora Currea

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Ghostgr Rider

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

David Traugot

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Jonathan Boyne

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Alejandra Vega

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Marcus Straub

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

jean rodriguez

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Emily Ochmanek

There should be no logging or mining in national forests or national parks. These land were set aside for protection and for the enjoyment of our citizens. Their intended purpose does not allow for profiteering by private interests!

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

David Conroy

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Merideth Taylor

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Anita Shanker

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

CW Cox

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Laura Elliott

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Patricia Takayama

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Helen Lindsay

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Ray Kalinski

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Deb Stringham

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Susan Gill

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Mercy Torra

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Kelly Saunders

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Richard Loeppert

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Jess Wiersma

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Douglas Schneller

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Chere Gruver

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Francisco Reina

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Liiv Saga

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Philip Torres

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Michael McLaughlin

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Jack Dennis

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Janet Lyman

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Anne Clark

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Niles, MI 491203418

>>> 68 year old, White Male , constituent (Politically Active Daily) in Niles, Michigan

Jesus must be angered constantly by the multiple methods the money changers have devised of dishonoring and destroying the Temple and all of God's creation.

Don't continue to be complicit in the Destruction of Life on Earth ! !

ANYTHING or EVERYTHING to rescue humanity and any part of the planet or wilderness (once our Garden of Eden) from their ongoing rape and murder by mankind's greed.

This is existential. Life and death. Another Catastrophic Emergency or Extinction, at any given moment. Wake Up and smell the corpses !

Climate destroyers and environmental crisis deniers are dangerous, intentionally ignorant, gluttonous, duped and deluded sellouts to the corporations, the military-industrial complex or the "oil"-igarchy

>>>> True Enemies of the People and the Planet!

Noam Chomsky's characterization of our present day Republican Party as the most dangerous organization in the "history of the world" is horrifyingly accurate.....

The "Drainer of the Swamp" and the readily pliable, "brain rinsed" CULT, naïve and prideful enough to persist in bowing to him are rendering cesspools, minefields and imminent Armageddon!!!Hard to believe SOME of those UN-American 'ditto-heads' ever saw a school book: much less, a college or university or BIBLE ? ! ! ?.. Have all of the, SO-CALLED, "Christian" Republicans, embracing Trump's idiopathic inhuman, "we say so", greed and power driven agenda, devised a way to get a camel through the eye of a needle? Do they even recognize the reference?

Extinction is on the horizon! ! ! ! ! ! ! !

For our Grandchildren.....

!End This Foolishness !

Survival must be our first priority !

What WOULD Jesus Do?

"

This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Massimo Fornaciari

"To whom it may concern,

I cannot believe the insanity of drilling in our national forests, or in any wild areas.

Just because there's something there does NOT mean you have to take it. Go back and read that last sentence aloud.

Investing in fossil fuels now is crazy. It's financially unsound.

Please read this well written form letter below aloud; it further expresses my thoughts and concerns.

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Donna Chavez

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Michelle Mehlhorn

"To whom it may concern,

I believe you should be considering not only the beauty of such a rainforest as the Tongass, but the loss of rare species of flora and fauna, the only such place in America, its uniqueness altogether and especially its ability to give you breath! Greed is certainly not worth the cost of all that and more. Please remind yourselves that your pockets not only will be lined with money, but also the sorrows of thousands upon thousands of your fellow humans.

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Gregory Gagnon

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Carla Wilson

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Richard Hallam

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Jennifer DeSimone-Jewell

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Deb Denbow

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Raquel Narvios

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Anne McNeil

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Conrad Henderson

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Dawn Crist

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

HC Cannon

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Sandra Smith

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Margaret Christine Robinett

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Toya Hibbs

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Josette Krusinski

Chicago, IL 606311575"

"To whom it may concern,

C'MON, People!!!!

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Fritz D.

"To whom it may concern,

Our environment is more important than corporations.

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Devin Abraham

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Gina Gaines

Harrisonburg, VA 228019507"

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Diane Gluck

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

jimi duke

This, like numerous other issues (climate change, food labeling, gun safety, immigration reform, prison reform, education reform, short-term lending regulation, healthcare reform, banking regulation, opioid regulation) remains a vexing problem primarily due to corporations' ability to curry favor with elected officials. The corrupting influence of money in our political system is undermining our democratic traditions and discouraging Americans from voting and/or running for office. This ominous development may well end our experiment in representative democracy unless we alter this decades-long trend. For the sake of the republic, we must amend the US Constitution to state that corporations are not people (and do not have constitutional rights) and money is not speech (and thus can be regulated by state and/or federal campaign finance laws). Short of accomplishing this, no other reform of significance will be achieved. The moneyed interests will turn any reform to their benefit, often at the expense of the nation as a whole.

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Marvin Blaustein

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Barbara Root

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

David Mondejar

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Aaron Brunette

"To Whom It May Concern In Our USDA:

Hello,

I am writing to request that you oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects.

This insane proposal to open 10 million acres of land in a vital National Forest would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive, selfish, irresponsible and reckless proposal.

Thank you for your time and for seriously considering my comments and my request.

Most Sincerely,

MB Honaker

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Aurora Sanchez Nunez

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Stanley McCleary

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Dennis Dougherty

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Mal Gaff

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Tracey Aquino

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Kim Notton

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Madison Watson

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Sacha de Nijs

Mary Jo Sheldon-DiVito

"To whom it may concern,

I have been to southern Alaska many times and the Tongass National Forest is one of the only temperate old growth forests left in the U.S. Most of the old growth is gone in Washington and Oregon. Logging is only 1% of Alaska's economy. Fishing is much more of the economy. Salmon is severely depleted in the lower 49 states and this is having a devastating effect on ocean life there. Mining and oil and gas development would do irreplaceable damage. The Southern Resident Orcas are endangered. There is no more salmon in California and the reduced runs in Oregon and Washington can not sustain them. They are starving to death. Must we ruin our country for current and future generations greed and short term profit

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Anna Neidig
