

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Matthew fernald

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples. **ALSO THIS FOREST NEEDS TO BE PROTECTED FOR THE GOOD OF THE ENVIRONMENT OVERALL!**

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Marcia Bailey

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Teri Koslen

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Carolyn Dennison

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Abby Seixas

Cheryl Gehman

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

C. GEHMAN

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Debra Sirois

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Barry Macomber

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Rachel Goggin

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Marc BÄ¼chner

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Robert Salazar Salazar

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

David and Betty Batty

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

John Tomlinson

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Warren Vogt

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Modell McEntire

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Charles Webster

"To whom it may concern,

Nature is under attack like never before in a time we need our forests and the forest of the Amazon and other places to protect us in the fight against global warming. The current Administration is all about money and short term profits with no accountability for the damage they leave for future generations. These are perilous times and catering to logging and mining interests is detrimental to our war against Climate Change.

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Donna Sawyer

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Carol Reppert

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Jan Jones

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Allison HInde

Terre Haute, IN 478033750"

Moreover, I think it is time to adjust to other sources of employment, as we are with the tobacco industry. You and I will not be here to benefit completely from this, however, our children and children's children will.

Oh, and did you forget history or decide to ignore Roosevelts and others' decisions to preserve the national parks for a reason. Maybe you have never enjoyed the national parks and never take anyone else there, and truly only care about your monetary gain. I think it is high time to actually keep the original intentions of national parks and leave them alone FOREVER!!!

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Anne Hollows

Exploiting this region is counter-productive. The risks of the damage inflicted, far out-weigh any monetary gains. It will actually cost the American tax-payer.

In respect of the crisis our environment is faced with, we desperately need the Tongass National Forest as a buffer against climate change.

Beth Bunting

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Beth Bunting

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Robert Worthington

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Rashad Hope

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Maryann Balish

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

diana aguila

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Deborah Pensabene

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Tina Cook

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Thomas Hoover

Lutz, FL 33558"

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Lauren Spear

Protect Tongass National Forest

"To whom it may concern,

I am opposed to opening the Tongass National Forest to logging and mining. Destroying this pristine and beautiful forest is beyond comprehension. Americans all over the country have submitted comments opposing the destruction of our public lands, yet this administration persists. They choose to ignore the will of the people, and we will ignore them at the ballot box. The barren mountainsides, tree stumps and scars from mining will be the legacy of the Trump administration.

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Diana Heeman

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

David Reyz

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Larry Kalb, M.A.

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands MUST be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Cathy Hayes

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Kathleen Phiffer

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Mary Adams

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Please Protect Tongass National Forest

"To operations of USDA,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Appreciatively,

Andrew Thomson

Peoria, AZ 85382"

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

S. Kohler

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Lynne Hughes

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Kaitlin Hurley

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

D. Farrimond

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Cherie Erwin

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Carol Radke

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Peg Hewitt

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

carl tegethoff

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Ann Marckesano

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Linda Larsen

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

lisa johnson

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Audrey Brownell

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Ben Martin

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Elissa Wagner

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Hector Nava

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Nicole Maurone

Protect Tongass National Forest

"To Whom It May Concern:

President Trump's Administration recently announced plans to make the Tongass National Forest (TNF) available to logging, mining and fossil fuel industries. This 'wild place' is our last -- and largest -- temperate rainforest and is home to unique, endangered wildlife.

Perversely, only those who profit from these environmentally destructive entities will benefit from exploiting the TNF. Also, this action will set a precedent to clear-cut other national forests and will trample on the rights of several Indigenous Tribes.

The Roadless Rule prevents clear-cutting 50+ million acres of national forests across the U.S. This legislation also saves taxpayers millions of dollars by limiting the number of harmful roadbuilding projects on our public lands.

Our national forests provide clean drinking water to millions of people living in the U.S. -- and -- they're critically important to curbing climate change.

Please stop the exploitation of these places and support the Roadless Rule.

Thank you for your consideration on this matter.

Sincerely,"

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Hermine Zavar

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

emme g

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Kristin Louis

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Regina Phillips

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Gilbert Kirk

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Julian Goodare

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

C Lambert

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Adeguire Adeguire

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Michele Smith

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Patrick Niese

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Jeff Foreman

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Yana Margolin

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Ann Currie

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Carla Boudreau

Protect Tongass National Forest

"To whom it may concern,

Trump just announced plans to strip the Tongass National Forest -- America's "Amazon" -- of key protections that keep out the logging and drilling industries. That is completely unacceptable. Our National Forests belong to " we the people ", not Trump or his corrupt Administration.

Are we suppose to believe that " a very stable genius" came up with this plan? It sounds more like someone who would betray and abandon our Kurdish allies who actually defeated the Islamic Caliphate with the help of our military and lost 12,000 of their fighters doing it.

USDA, don't abandon and betray the American people who want their National Forests preserved and 1000-year-old trees not turned into " Charmin ".

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! "To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

DONNA GORCZYCA

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Jim and Sophie Swirczynski

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

Thomas Hutton

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.

Thank you,

j g

Protect Tongass National Forest

"To whom it may concern,

I strongly urge you to oppose the opening of 10 million acres of land in Alaska's Tongass National Forest for mining and logging projects. This would severely compromise our last remaining truly wild forest and be a huge blow to biodiversity. These lands are home to pacific salmon, iconic bald eagles, southern resident orcas, and even a 1000-year-old tree! It also contains the traditional homelands of the Tlingit, Haida and Tsimshian Peoples.

Beyond its natural beauty and cultural importance, the Tongass Forest is one of the world's best climate defenses. The old trees store nearly 10-12 percent of all carbon consumed by America's national forests -- and it's Alaska's first defense against the worsening climate crisis.

These lands must be protected and I urge the agency to take action to block this destructive proposal.
