Concerning

Petrox Northern Extension Pipeline and Associated Fruitland Coal Gas Horizontal Drilling Project.

The EA is deficient in its approach to forest fires/managements. The assertion that the “proposed action would have no impact to the resource” indicates that the FS is oblivious to the recent final seasonal impact for the upcoming fire season. To those of us who live in the vicinity of the SJNF, Brad Pietruszka’s report describes a forest in “record drought conditions which is likely to worsen.

The EA states that a complete analysis of the fire danger is not necessary.

Pietruszka warns is that this fire behavior poses high resistance to control with above normal odds of large fires requiring significant resource commitment.

Concerning
Petrif Nothan Extension
Pipeline and Associated
Fruitland Coal Gas Horizontal
Drilling Project.

The EA is deficient in its
approach to forest fires/
managements. The assertion
that the "Proposed action would
have no impact to the resource"
indicates that the FS is
oblivious to the recent final
seasonal impact for the
upcoming fire season. To those
of us who live in the vicinity
of the SD NF, Brad Beluszko's
report describes a forest in
"record drought condition which
is likely to worsen."

The E A states that a complete analysis of the fire danger is not necessary.

Pietruszka warns us that this fire behavior poses high resistance to control with above normal odds of large fires requiring significant resource commitment.
