

Attention payette national forest supervisor,

I have been closely following Midas Gold Idaho's plans for the last two years. I appreciate the opportunity to comment on their Draft EIS. Midas Gold Idaho presents a wonderful opportunity for our wonderful state.

Because of the requirements that Midas Gold Idaho is required to follow and must agree to it is a win, win for the State of Idaho. The fact, this company is required by law to set aside all of the money it needs for restoration before mining can begin.

I am completely confident about Midas Gold Idaho staying true to its word. The company has already started restoration work at the site. They have planted more than 60,000 trees to help reduce the amount of sediment going into the river, installed solar energy panels at site to reduce greenhouse gas emissions and improved miles of road along the river to protect fish habitat.

Alternative 2 appears to be the best option for the project moving forward. In that alternative, the company decreased traffic during operations by 26 percent by generating lime on site (table 2.3-2, 2.4-3, 2.3-8). The company would also reprocess legacy materials in the Meadow Creek Basin, SODA and Hecla Heap, which remove them as a source for leaching arsenic and antimony into the ground and surface water. The to analysis in the document (4.9-17) shows this will make further water degradation from these sources less likely in the future. Removing legacy tailings waste will also improve water quality in Meadow Creek Valley (4.12).

For the above reasons and many more, please move forward with alternative 2 of the Stibnite Gold Project as it is important to all Idahoans.

Thank you.

Name: Paul Hawker
