

To Whom it May Concern,

I am writing to express my views on Midas Gold Idaho's Stibnite Gold Project. The opportunity presented by the Stibnite Gold Project is compelling for many reasons and it is a project I am committed to seeing come to fruition.

Midas Gold Idaho is not your typical mining company. The company realizes the Stibnite Gold Project site has been damaged after nearly a century of mining and that something must be done if we ever want to reclaim this brownfield site. Midas Gold Idaho wants to restore the site and take care of the environment through mining. I believe alternative 2 as outlined by the U.S. Forest Service is the best chance to help repair the historic Stibnite Mining District. This alternative will result in better water quality in the East Fork of the South Fork of the Salmon River due to lower concentrations of antimony, mercury and arsenic (DEIS 4.9-70). An additional 26.5 km of habitat for anadromous salmonoids becomes available before mining begins with the construction of the fish passageway around the Yellow Pine pit (DEIS 4.12-13). Alternative 2 would also provide a net gain of 11.1 km of intrinsic potential habitat for steelhead trout and 12.4 km for bull trout (DEIS 4.12-22). These are benefits that should be fully recognized.

I encourage the U.S. Forest Service to move the Stibnite Gold Project forward and adopt Alternative two as the preferred alternative.

Most Respectfully,

Name: Tyler Warme
