

Ms. Jackson,

Midas Gold Idaho has been a member of our community for the past decade. During this time, the company and its employees have become champions and supporters of the community. They have volunteered their time in our schools and given generously to community causes. The company's track record of following through on its promises and doing the right thing gives us the confidence to write in support of permitting the Stibnite Gold Project.

Midas Gold has made it clear reclamation efforts will start alongside operations. For example, before mining ever begins, fish will be reconnected to their native spawning groups upstream through a fish passageway. Eventually, the Yellow Pine Pit will be backfilled and the river can be permanently reconnected. Analysis in the draft Environmental Impact Statement showed removing existing barriers to fish migration will help Chinook salmon, bull trout and Steelhead. In fact, DEIS 4.12-39 says long-term access to blocked habitat would result in increased genetic diversity of isolated populations and productivity. They have worked to find safe access routes to the site that keeps vehicles away from our precious waterways. Additionally, under alternative 2, the company decreased traffic during operations by 26 percent by generating lime on site (table 2.3-2, 2.4-3, 2.3-8). Plus, the company is trying to minimize their impact on the environment by keeping facilities within the existing footprint of historic mining operations.

Thank you for considering my thoughts on the project. I urge you to move forward with the project.

Thanks Again,

Name: Deborah Johnston
