

Dear Ms. Linda Jackson,

Midas Gold Idaho has been a member of our community for the past decade. During this time, the company and its employees have become wonderful champions and supporters of our community. They've volunteered their time in our schools and given generously to community causes. The company's track record of following through on its promises and doing the right thing gives us the confidence to write in support of permitting the Stibnite Gold Project.

There are many checks and balances in place to ensure Midas Gold Idaho follows through on its promises to restore the site. In fact, the company is required by law to set aside all of the money it needs for restoration before mining can begin. However, I am not worried about Midas Gold Idaho staying true to its word. The company has already started restoration work at the site. They have planted more than 60,000 trees to help reduce the amount of sediment going into the river, installed solar energy panels at site to reduce greenhouse gas emissions and improved miles of road along the river to protect fish habitat. Alternative 2 appears to be the best option for the project moving forward. In that alternative, the company decreased traffic during operations by 26 percent by generating lime on site (table 2.3-2, 2.4-3, 2.3-8). The company would also reprocess legacy materials in the Meadow Creek Basin, SODA and Hecla Heap, which remove them as a source for leaching arsenic and antimony into the ground and surface water. The to analysis in the document (4.9-17) shows this will make further water degradation from these sources less likely in the future. Removing legacy tailings waste will also improve water quality in Meadow Creek Valley (4.12).

I urge you to accept Midas Gold's plan as outlined under alternative 2 and continue moving this project forward.

Have a good day,

Name: Vincent Fioretti
