Re: Stibnite Gold Project - Commentary/Remarks in Favor

Dear Ms. Jackson,

As a professional mining consultant my firm has been following the development of this project for a few years and find the aspects thereof entirely positive for the environment, the Citizens of Idaho, and the strategic security of the United States. Rarely do projects come to current opportunity that have the ability to correct previous environmental damage and provide so numerous positive results for all concerned local parties but also for the nation as a whole. Lessening the Nation's dependence on foreign sources of critical strategic metals is important to providing security for all citizens. Cleaning-up an historic environmental problem and "setting things right" is the correct way to proceed. The Midas Gold personnel, in my opinion, are committed and have the resources to achieve all positive outcomes as specified in Alternative 2.

I thank you for the opportunity to comment and thoughtfully reviewing and considering the commentary contained herein during the Draft Environmental Impact Statement Period for the Stibnite Gold Project.

Respectfully submitted,

E.H. Greenwald, Jr.
