

Attention payette national forest supervisor,

I have reviewed the Plan of Restoration and Operations and met with members of Midas Gold Idaho to better understand the company's plans for the Stibnite Gold Project. Below are my comments on the plan to be included in the comment period.

Private industry is needed to restore the Stibnite Gold Project site. Unfortunately, the federal government attempted to restore the area but problems in the area still persist today. Midas Gold Idaho wants to restore the site through mining. The company has spent the last six years studying the environment of the site, gathering input from the community and carefully analyzing many options to mine and perform restoration work. I encourage you to adopt alternative 2 outlined in the DEIS as you evaluate the project moving forward. The plan is well thought out, practical and environmentally sound. Alternative 3 and 4 do not provide as many environmental impacts. They would put construction and mine traffic adjacent to miles of the East Fork of the South Fork of the Salmon River, increasing the chance of spills, and move the tailings storage facility to more pristine habitat. Alternative 2 on the other hand will reduce long-term metal loading in the ground and surface water by reprocessing historic tailings (DEIS 4.9), improve productivity of fish species in the area by opening up access to more habitat upstream (DEIS 4.12), provide a net gain of 9.3 km of volitionally accessible intrinsic potential habitat for Chinook Salmon (table 4.12-29) and reprocess old tailings waste, would lead to long-term reduction in metal loading in ground and surface water (DEIS 4.9).

For the above reasons and many more, please move forward with alternative 2 of the Stibnite Gold Project as it is important to all Idahoans.

Thanks for your Consideration,

Name: Douglas Carver
