

Dear Payette National Forest Staff,

I have reviewed the Plan of Restoration and Operations and met with members of Midas Gold Idaho to better understand the company's plans for the Stibnite Gold Project. Below are my comments on the plan to be included in the comment period.

The old Stibnite mine site will likely never be cleaned up unless industry takes responsibility for those who came before them. Midas Gold plans to do just that. By mining the site, Midas Gold plans to restore the natural flow and gradient of the East Fork of the South Fork to reconnect historical spawning grounds. The DEIS analysis showed removing existing barriers to fish migration will help Chinook salmon, bull trout and steelhead. In fact, DEIS 4.12-39 says long-term access to blocked habitat would result in increased productivity and genetic diversity of isolated populations. The company will repair blowout creek, permanently solving a source of massive sedimentation and habitat degradation. Plus, in reprocessing and repurposing millions of tons of spent ore and unconstrained tailings, Midas will safeguard water quality indefinitely. To protect the environment, the Forest Service is requiring Midas Gold to implement 156 mitigation measures (appendix D of the DEIS). Part of these measures include a one to one replacement of wetland areas (DEIS 4.11-26), which would lead to a net gain of 346.5 wetland functional units – a 40% increase (DEIS appendix D, table 8-2).

As the U.S. Forest Service and other state and federal agencies review the proposed plan and determine the course of action, I encourage you to consider and appropriately weigh the positive benefits Midas Gold will have on Idaho. Alternative Two truly is a win-win opportunity for Idahoans and the environment.

Thank You,

Name: Grant A Bradbury
