

Dear US National Forest Service Staff,

Thank you for the opportunity to comment on Midas Gold Idaho's Plan of Restoration and Operations. Over the last several years, I've had the opportunity to hear a handful of presentations on the Stibnite Gold Project, sit down with project staff and observe how the company has lived out its mission as it has grown. It is with this knowledge that I encourage you to permit the Stibnite Gold Project.

Reviewing the draft environmental impact statement, I believe Alternative 2 is the best choice for Idaho. Alternative 3 would have a larger project footprint, impact more wetlands based on functional units, impact more stream reaches and delay the benefits of the project by two years. Alternative 2 would have less impact on the environment. Alternative 4 is not a good choice because it would put traffic to site right next to the East Fork of the South Fork of the Salmon River. This puts waterways and fish at an unnecessary risk. Alternative 4 also would delay the project unnecessarily. Alternative 5 is not even a realistic option because it would leave the site in the same condition it is today. Right now, fish are blocked from their native spawning grounds and arsenic and antimony are leaching into the ground and surface water. It is unconscionable to think we could leave the area in this state of repair. Alternative 2 would allow Midas Gold to provide critical minerals for the U.S. and clean up the site.

Thank you for your time and consideration.

Most Respectfully,

Name: Mike Shaak
