

Attention Ms. Jackson,

I am writing to share my thoughts on Midas Gold Idaho's Stibnite Gold project. There are many reasons why I am excited for Midas Gold's project to come to life and I hope through my comments you will understand why.

Midas Gold has made it clear reclamation efforts will start alongside operations. For example, before mining ever begins, fish will be reconnected to their native spawning groups upstream through a fish passageway. Eventually, the Yellow Pine Pit will be backfilled and the river can be permanently reconnected. Analysis in the draft Environmental Impact Statement showed removing existing barriers to fish migration will help Chinook salmon, bull trout and Steelhead. In fact, DEIS 4.12-39 says long-term access to blocked habitat would result in increased genetic diversity of isolated populations and productivity. They have worked to find safe access routes to the site that keeps vehicles away from our precious waterways. Additionally, under alternative 2, the company decreased traffic during operations by 26 percent by generating lime on site (table 2.3-2, 2.4-3, 2.3-8). Plus, the company is trying to minimize their impact on the environment by keeping facilities within the existing footprint of historic mining operations.

The Stibnite Gold Project is the type of project our state needs. I highly encourage the U.S. Forest Service to permit this project, using the alternative two presented by Midas Gold, as expeditiously as possible.

Best Wishes,

Name: Mario Salas
