

Dear US National Forest Service Staff,

It is with great pleasure that I write to the U.S. Forest Service to encourage you to permit the proposed activities outlined by Midas Gold in the Plan of Restoration and Operations during this public input process.

Midas Gold has made it clear reclamation efforts will start alongside operations. For example, before mining ever begins, fish will be reconnected to their native spawning groups upstream through a fish passageway. Eventually, the Yellow Pine Pit will be backfilled and the river can be permanently reconnected. Analysis in the draft Environmental Impact Statement showed removing existing barriers to fish migration will help Chinook salmon, bull trout and Steelhead. In fact, DEIS 4.12-39 says long-term access to blocked habitat would result in increased genetic diversity of isolated populations and productivity. They have worked to find safe access routes to the site that keeps vehicles away from our precious waterways. Additionally, under alternative 2, the company decreased traffic during operations by 26 percent by generating lime on site (table 2.3-2, 2.4-3, 2.3-8). Plus, the company is trying to minimize their impact on the environment by keeping facilities within the existing footprint of historic mining operations.

After reading my letter, I hope you can see why you should permit the Stibnite Gold Project. This project is a good thing for Idaho, helps decrease America's dependence on foreign countries for critical minerals and cleans up the environment.

Best Wishes,

Name: Tad Mundell
