

Usfs,

We can have a Gold Mine in Idaho that does protect and restore. This project is vital to clean up the many years of neglect at the Stibnite Site. I have been in that area for the last 20 years and it is a mess. Midas has already started to restore the site. Allow this mine with the oversight I know the USFS can provide.

Midas Gold Idaho's Stibnite Gold Project presents Idaho, particularly rural Idaho, with a huge economic and environmental opportunity. I am writing to encourage you to permit the project as quickly as possible.

Having compared Alternative 2 with Alternative 3, I believe that Alternative 2 is better from an environmental perspective, having less area, less impact on wetlands based on functional units, less impact on stream reach and avoiding a costly two-year delay to the project. Further, I also believe that Alternative 2 is lower risk and environmentally less impactful and risky than Alternative 4 given the proximity of the Alternative 4 transportation route to major fish-bearing waterways where construction would pose a significant risk, and the delay the project unnecessarily for two additional years at considerable cost. Finally, Alternative 5 is the worst of all alternatives as it means no environmental restoration, no jobs, no capital investment and leaves environmental issues at site unresolved.

The Stibnite Gold Project is the type of project our state needs. I highly encourage the U.S. Forest Service to permit this project, using the preferred alternative presented by Midas Gold, as expeditiously as possible.

Thanks for your time,

Name: Jason Speer
