

I highly agree and support the new proposed stibnite mine as a previous mine worked, born and raised Idahoan, and as someone who possesses a degree in natural resources from the university of Idaho. Those who do not support the mine project lack the scope, education, and experience to have an opinion on the subject. I hope this project gets approved.

Usfs,

I appreciate the opportunity to comment on the Stibnite Gold Project as it will directly impact me and my access to the backcountry.

Restoring the Stibnite Gold Project site will be an incredible investment. Work clearly needs to be done in the area but it should not be funded through taxpayer dollars. Fortunately, Midas Gold Idaho wants to make the investment. The company is proposing a mining project and full-scale restoration project. They have plans to reconnect fish with their natural spawning grounds. According to analysis by the U.S. Forest Service in section 4.2 of the DEIS, establishing long-term access to historically blocked critical habitat would result in increased productivity for Idaho's bull trout, chinook and steelhead. This free movement and access to habitat can improve genetic diversity of the fish. Midas Gold will also properly reprocess and safely store old tailings, which, as outlined in Chapter 4 section 4.9 of the DEIS, will lead to a long-term reduction in metal loading in ground and surface water. The company will also solve sedimentation issues by repairing Blowout Creek.

Thank you for your time and consideration. Alternative two is by far the best option in the DEIS.

Thanks for your Consideration,

Name: Cade Carlson
