

Dear Payette National Forest Supervisor,

Thank you for the opportunity to provide my feedback as part of Midas Gold Idaho's public permitting process.

One of the biggest challenges facing Idaho is having a trained workforce. Midas Gold not only plans to hire hundreds of Idahoans but the company will provide employees with training to build a more skilled workforce in Idaho. We applaud Midas Gold's commitment to helping Idahoans get valuable training that may not otherwise be available. This commitment by the company will help benefit Idaho families and allow Idaho to attract new businesses in the future. To date, Midas Gold has spent over \$89 million in Idaho by prioritizing local vendors and contractors. If the project moves forward, the company will also invest heavily in environmental restoration, especially under alternative 2. During operations, Midas Gold will treat water to lower levels of arsenic, antimony and mercury in the river. This investment will cause concentrations to be below the current baseline conditions (DEIS 4.9-70). The company will also be able to increase productivity and genetic diversity of isolated populations of chinook, bull trout and steelhead by opening up long-term access to blocked habitat (DEIS 4.12-39).

Additionally, as an employer on the support side of the mining business, any project that is approved in the US has huge implications for our business. It drives up demand and improves margins and employment rates. A project like Midas Gold helps the local economies of the entire Inter-Mountain West region.

After reading my letter, I hope you can see why you should permit the Stibnite Gold Project. This project is a good thing for Idaho, helps decrease America's dependence on foreign countries for critical minerals and cleans up the environment.

Sincerely,

..Dan Miners
