

Dear Ms. Jackson,

I appreciate the opportunity to comment on the Stibnite Gold Project as it will directly impact me and my access to the backcountry.

The site is rich in gold deposits but it also has antimony, which was recently deemed a critical by the federal government. Antimony is used as a fire retardant and metal strengthener. It is used in everything from batteries, textiles, cell phones, plastics and cable sheathing. Right now, the U.S. doesn't have a domestic antimony mine. The Stibnite Gold Project could provide one-quarter of the American demand for antimony in the country. This is so important with the current tenuous trade relations in our country.

The Stibnite Gold Project is the type of project our state needs. I highly encourage the U.S. Forest Service to permit this project, using the alternative two presented by Midas Gold, as expeditiously as possible.

Best regards,

Name: Larry & Mary Wright
