

To Whom it may Concern,

I suppose that would be every person who calls Idaho home or benefits from this wonderful state's natural beauty.

Has any person or organization, Federal or state run group stepped forward over the passed 100 years to offer clean up, restoration for that which was left behind during the passed operations at Stibnite? We all know the answer.

But here's a company willing to step forward to offer MANY NEW jobs, at good wages which will benefit in multiple ways the entire state. Adding to that they will change what NO Other has offered to do. I would love to come up and be able to fish in the streams that are now in many ways polluted. How exciting to think that the fish would once again be able to swim upstream to spawn and reproduce!

Would it not be a huge benefit to this nation in many ways to loosen the stronghold that foreign countries have on us? One rare earth element changes many things. This found at the site.

This country was built on production, business and doing what is right. I urge you to allow us to continue with that way of life and to improve the way of life, both human and nature in this state.
