

Payette National Forest Supervisor,

This project (no matter how careful) negatively impacts our natural environment. This watershed is too important to be bargaining with for mineral gain. Don't let the big money have their way, it's the sole reason our earth and our species is being extinguished. The greed can't be allowed to win. There's only one salmon river drainage and if it's ruined, it's forever.

Please think about how this will affect my young children and their future in this area.

Respectfully,

Scott Fereday
