

Hopefully my message to issue of the Midas Project Permit will be added to the many you will receive. As a professional in the industry - Mine/Project/ Field Geologist w/ + 50 years experience and also a great lover of outdoor activities including fishing, hiking, camping, and traveling - the project has something for everyone, A job that will provide great-paying jobs many years for lots local people, taxes that will certainly help the local tax base, a rejuvenated salmon run that is long over due, and especially the clean-up work that will be part of the over-all project. To find a company that is willing to do that kind of work ( the clean-up part ) is rare and should be greatly appreciated. Also, the recovery of Antimony as part of the mining process should not be overlooked, or ignored. It's a strategic metal which the U.S is totally import dependent and this project will certainly help reduce that.

Thanks for reading my message. I strongly urge you to permit the project ASAP.
