

Attention Ms. Jackson,

I have reviewed the Alternative 2 and met with members of Midas Gold Idaho to better understand the company's plans for the Stibnite Gold Project. Below are my comments on the plan to be included in the comment period.

The Stibnite Gold Project is an opportunity to address high amounts of sedimentation and drainage of the wetlands that happened as a result of the dam failure at Blowout Creek in the 1960s. This has caused extensive, ongoing erosion for decades and the effects are concerning for fish habitat and water quality. Midas Gold intends to address these issues by repairing the damage and installing a French drain at the site of the old dam to permanently keep sediment out of the river and restore wetlands. According to the U.S. Forest Service's own draft environmental impact statement, their plan for mitigation and restoration will help address this issue. Chapter 4 states that proposed mitigation will provide 1:1 replacement of wetland acres (4.11.2.3.1.1-2).

This project is a huge opportunity for Idaho. I encourage the U.S. Forest Service to permit alternative 2 so this brownfield site can finally be restored. The comment period has been extended once already. Sixty days gives Idahoans enough time to submit their comments and I hope there will be no additional delays.

Respectfully,

Name: Dan pratt
