

Hello,

Thank you for the opportunity to provide feedback on the Stibnite Gold Project as part of the public permitting process. I know this project will have a positive impact on the environment, communities surrounding the site and Idahoans.

Today at the site, leftover mining waste is leaching metals into groundwater and hurting wildlife and local communities. Midas has been monitoring the site for the last decade and discovered there are high levels of arsenic and antimony in the water, far beyond what is acceptable for drinking water standards. Of course, these problems were created long ago by historical mining operations and not by Midas Gold. However, the company has a plan to address these problems. Alternative 2 offers viable solutions to improve the site. It creates a plan to clean up existing tailings and store future tailings in a state-of-the-art storage facility. I trust Midas to safely reprocess and store the tailings because their facility contains several important design factors to prevent against breaches, leaks, or excessive water accumulation.

I encourage the USFS to move the Stibnite Gold Project forward and permit Midas Gold Idaho's project as outlined in their Modified Plan of Restoration and Operations, alternative 2 in the DEIS. The USFS has provided meaningful time to submit comments and already extended the comment period once, there should be no further delays.

Please keep my comments in mind,

Name: Steven Bauer
