

Ms. Jackson,

If Midas Gold Idaho is allowed to move forward with the Stibnite Gold Project, they will reclaim an area impacted by historical mining, create hundreds of well-paying jobs and provide a huge boost to our economy in the process. It is a win-win for Valley County. We need to permit the project.

Salmon have been cut off from miles of high-mountain spawning grounds and rearing habitats since roughly 1938, when the East Fork of the South Fork of the Salmon River (EFSFSR) was diverted around the Yellow Pine Pit. The only way for salmon to reproduce is by stocking them in Meadow Creek, where spawning occurs. We need to do better. As part of Midas Gold's proposal in Alternative Two, the company would design and install a fish passageway to help connect fish to their native spawning grounds for the first time in decades. The passageway would be built using best practices learned from successful examples used around the world. And it would be constructed before mining even starts. Once mining at the Yellow Pine Pit is complete, Midas Gold would begin full restoration of the river, creating a long-term solution for salmon to spawn upstream. In the Draft Environmental Impact Statement, the U.S. Forest Service found that removing these historical barriers to migration will help local fish populations by increasing productivity.

Midas Gold Idaho wants to invest \$1 billion in our state, bring more than hundreds of jobs to rural Idaho and still provide access to Idaho's public lands. This is the type of project our state needs. The U.S. Forest Service has provided Idahoans with meaningful tools to easily review the document and ample time to comment. I highly encourage the U.S. Forest Service to permit this project following alternative two.

Best Wishes,

Name: WR Henderson
