USFS Officials,

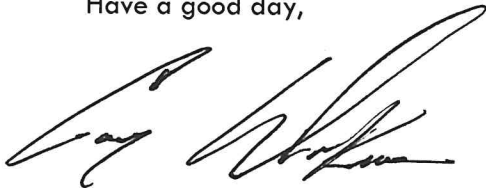

Thank you for the opportunity to provide feedback on the Stibnite Gold Project as part of Midas Gold Idaho's comment period. I have been closely following Midas Gold Idaho's plans since they first came into our state, in large part because much of the proposed project will take place on public land. The more I have learned about the project, the more excited I am about the possibilities for the future.

The old Stibnite mine site will likely never be cleaned up unless industry takes responsibility for those who came before them. Midas Gold plans to do just that. By mining the site, Midas Gold plans to restore the natural flow and gradient of the East Fork of the South Fork to reconnect historical spawning grounds. The DEIS analysis showed removing existing barriers to fish migration will help Chinook salmon, bull trout and steelhead. In fact, DEIS 4.12-39 says long-term access to blocked habitat would result in increased productivity and genetic diversity of isolated populations.

The company will repair blowout creek, permanently solving a source of massive sedimentation and habitat degradation. Plus, in reprocessing and repurposing millions of tons of spent ore and unconstrained tailings, Midas will safeguard water quality indefinitely. To protect the environment, the Forest Service is requiring Midas Gold to implement 156 mitigation measures (appendix D of the DEIS). Part of these measures include a one to one replacement of wetland areas (DEIS 4.11-26), which would lead to a net gain of 346.5 wetland functional units – a 40% increase (DEIS appendix D, table 8-2).

I hope the U.S. Forest Service will realize the benefits this project and permit the Stibnite Gold Project using alternative 2.

Have a good day,

Cory Workman
