

U.S.F.S.,

I am writing to share my thoughts on Midas Gold Idaho's Stibnite Gold project. There are many reasons why I am excited for Midas Gold's project to come to life and I hope through my comments you will understand why.

Today at the site, leftover mining waste is leaching metals into groundwater and hurting wildlife and local communities. Midas has been monitoring the site for the last decade and discovered there are high levels of arsenic and antimony in the water, far beyond what is acceptable for drinking water standards. Of course, these problems were created long ago by historical mining operations and not by Midas Gold. However, the company has a plan to address these problems. Alternative 2 offers viable solutions to improve the site. It creates a plan to clean up existing tailings and store future tailings in a state-of-the-art storage facility. I trust Midas to safely reprocess and store the tailings because their facility contains several important design factors to prevent against breaches, leaks, or excessive water accumulation.

After reading my letter, I hope you can see why you should permit alternative 2 of the Stibnite Gold Project. This project is a good thing for Idaho, helps decrease America's dependence on foreign countries for critical minerals and cleans up the environment. These benefits cannot wait. Sixty days is long enough for the comment period.

Thank You,

Name: SOLOMON CONTEH
