

Dear Ms. Jackson,

I am writing to express my views on Midas Gold Idaho's Stibnite Gold Project. The opportunity presented by the Stibnite Gold Project is compelling for many reasons and it is a project I am committed to seeing come to fruition.

Midas Gold is very aware of the water quality concerns at site and has been sampling it for years. They've found very high arsenic and antimony levels in certain areas, in some cases 700 times worse than what is considered safe. To address these issues, the company will remove legacy tailings and other waste that cause this issue. Overall, Alternative 2 seems to cover every risk factor possible; it improves upon the company's original 2016 plan, which they adjusted following feedback, and it is superior to Alternatives 3 and 4, which have more safety concerns and could cause delays. And of course, it is better than Alternative 5, which is to do nothing; we cannot afford that approach after all these years.

Thank you for the thorough review of the Stibnite Gold Project. I urge you to now move forward and permit the mine using alternative 2, so Midas Gold can put Americans back to work.

Best regards,

Name: Scott Alan Haley
