

Attention payette national forest supervisor,

I have reviewed the Alternative 2 and met with members of Midas Gold Idaho to better understand the company's plans for the Stibnite Gold Project. Below are my comments on the plan to be included in the comment period.

After reviewing the DEIS, I hope the U.S. Forest Service will select Alternative 2, as it seems to be the best option for the site. Under this alternative, Midas Gold designed a very safe Tailings Storage Facility, with 90 percent surrounded by granite mountains and the rest retained by a dam buttressed by 65 million tons of course rockfill. To date, the company has a stellar safety record. They have a nearly decade-long record of transporting hazardous materials without incident; since 2011, they've conducted over 195 successful fuel hauls involving 279 fuel trucks and have gone several years without a significant spill. If the other alternatives are selected, it could slow down the environmental and economic benefits of the project “ in the case of Alternative 5, it could even mean the site receives no attention and the problems we are experiencing today would simply remain.

I urge you to accept Midas Gold's plan as outlined under alternative two. The U.S. Forest Service has provided the public with helpful virtual tools and materials to submit meaningful comments on the project within the allotted timeframe. It is time to move this project forward.

Sincerely,

Name: Nathan Evans
