

Linda Jackson,

Thank you for the opportunity to provide feedback on the Stibnite Gold Project as part of Midas Gold Idaho's Comment Period. I have been closely following Midas Gold Idaho's plans since they first came into our state, in large part because much of the proposed project will take place on public land. The more I have learned about the project, the more excited I am about the possibilities it will bring into our state.

As the East Fork of the South Fork of the Salmon River that passes through Stibnite, it must travel by 10.5 million tons of old, spent ore deposits and tailings materials from decades of mining activity. As you can imagine, this degrades water quality in the river. Midas Gold Idaho will remove, reuse, and reprocess these tailings and waste rock, which your own draft environmental impact statement says will help the local ecosystem by reducing the high concentrations of metals that have leached into the water. In Chapter 4 of the draft EIS, it says removing legacy tailings and waste lowers concentrations of antimony and arsenic in the East Fork South Fork of the Salmon River (4.9-70).

This project is a huge opportunity for Idaho. I encourage the U.S. Forest Service to permit alternative 2 so this brownfield site can finally be restored. The comment period has been extended once already. Sixty days gives Idahoans enough time to submit their comments and I hope there will be no additional delays.

Sincerely,

Name: Steven P Schultz
