

Dear US National Forest Service Staff,

I am writing in support of the Stibnite Gold Project. Thank you for the opportunity to provide my feedback as part of the National Environmental Policy Act.

Today at the site, leftover mining waste is leaching metals into groundwater and hurting wildlife and local communities. Midas has been monitoring the site for the last decade and discovered there are high levels of arsenic and antimony in the water, far beyond what is acceptable for drinking water standards. Of course, these problems were created long ago by historical mining operations and not by Midas Gold. However, the company has a plan to address these problems. Alternative 2 offers viable solutions to improve the site. It creates a plan to clean up existing tailings and store future tailings in a state-of-the-art storage facility. I trust Midas to safely reprocess and store the tailings because their facility contains several important design factors to prevent against breaches, leaks, or excessive water accumulation.

I urge you to accept Midas Gold's plan as outlined under alternative two. The U.S. Forest Service has provided the public with helpful virtual tools and materials to submit meaningful comments on the project within the allotted timeframe. It is time to move this project forward.

Best Wishes,

Name: Michelle Stephenson
