

Usfs,

I am writing to share my thoughts on Midas Gold Idaho's Stibnite Gold project. There are many reasons why I am excited for Midas Gold's project to come to life and I hope through my comments you will understand why.

The Stibnite Gold Project is an opportunity to address high amounts of sedimentation and drainage of the wetlands that happened as a result of the dam failure at Blowout Creek in the 1960s. This has caused extensive, ongoing erosion for decades and the effects are concerning for fish habitat and water quality. Midas Gold intends to address these issues by repairing the damage and installing a French drain at the site of the old dam to permanently keep sediment out of the river and restore wetlands. According to the U.S. Forest Service's own draft environmental impact statement, their plan for mitigation and restoration will help address this issue. Chapter 4 states that proposed mitigation will provide 1:1 replacement of wetland acres (4.11.2.3.1.1-2).

There has been more than sufficient time to comment on the Stibnite Gold Project. I encourage the U.S. Forest Service to move the Stibnite Gold Project forward and adopt Alternative two as the preferred alternative.

Respectfully,

Name: Robert Gloss
