

Hello,

Thank you for the opportunity to provide comments concerning the Stibnite Gold Project.

Midas Gold is aware of the water quality concerns at site and has developed plans to address the issues. The company will remove legacy tailings and other waste that have contributed to this issue. Overall, Alternative 2 covers risk factors of concern and addresses more concerns than Alternatives 3 and 4, which have more safety concerns and could cause delays. And of course, it is better than Alternative 5, which is to do nothing; we cannot afford that approach after all these years.

This Stibnite Gold Project is an important opportunity for Idaho and the USA. Please use alternative 2 for approving the Project allowing the benefit to Idaho citizens to be realized.

Sincerely,

Ruth A Carraher
