

Attention Linda Jackson,

I am writing in support of the Stibnite Gold Project and the benefits it will bring to Idaho. This project has the potential to put hundreds of Idahoans to work, bring a \$1 billion investment into our state and restore an area of Idaho's backcountry desperately in need of repair.

The Stibnite Gold Project presents Idaho with the best opportunity clean up the abandoned Stibnite Mining District. The area needs to be cleaned up. If no action is taken, important fish populations will continue to be blocked from their native spawning grounds and high levels of arsenic and antimony will continue to leach into the ground and surface water. Midas Gold presents the best opportunity to address these problems and provide our nation with its only domestically mined source of antimony. One of the many benefits of mining in the United States is our superior safety standards compared to other countries. Midas Gold has taken safety seriously and only had one lost time incident in the last 55 months. This will continue during operations. The company will have an entire safety department dedicated to overseeing worker safety and training. The company will also have emergency medical technicians and emergency equipment and supplies on site, including an ambulance, first aid and medical supplies (PRO; pg. 2-3). This planning will help keep workers safe and prevent a strain on community resources.

As the U.S. Forest Service and other state and federal agencies review the proposed plan and determine the course of action, I encourage you to consider and appropriately weigh the positive benefits Midas Gold will have on Idaho. We need to move this project ahead after the 60-day comment period. Alternative Two truly is a win-win opportunity for Idahoans and the environment.

Best regards,

Name: Dorothy Segelson
