Re: Comments concerning the Stibnite Gold Project EIS #50516

Dear Sir or Madam,

I am in favor of the Stibnite Gold Project. I am a consultant in the exploration-mining industry and natural resources industry in general. I consider the Stibnite Project to have solid technical and economic viability that assures as much as future economic and societal conditions can be assumed, fulfilling environmental and regulatory requirements and enhancing the local and regional society and economy. The major factors that I consider that support these assurances and thus my support of the Stibnite Gold Project are:

Economic-

1. Positive to local and regional economies.
2. Midas Gold has engaged local and regional businesses in the project from project start to date.

Environmental-

1. Legacy issues corrected-(a) Waste piles largely removed with metals recovered where possible. (b) Surface and near-surface hydrology restored. (c) Previous mining-processing footprint re-used as much as possible.
2. Use of existing infrastructure footprint as much as possible.
3. Incorporation of renewable energy sources.
4. Incorporation of water recycling as much as possible.
5. Minimization of new ground disturbance and excavation.
6. Cyanide use provides much better control and decreases time to final closure.

7. An existing corporate environmental policy with provision for continuous improvement that addresses the key aspects.

Social-

1. Midas Gold has engaged the local residents in the project from project start to date.
2. Accommodation of recreational use of the land.
3. Community involvement is included as a corporate core value along with safety, transparency and accountability.

Thank you for the opportunity to comment on the Stibnite Gold Project.

Sincerely,

Christopher M. Kravits
