

GREETINGS,

I am writing in support of the Stibnite Gold Project and the benefits it will bring to Idaho. This project has the potential to put hundreds of Idahoans to work, bring a \$1 billion investment into our state and restore an area of Idaho's backcountry desperately in need of repair. If not with this project, then how are these legacy remediation projects to be completed or paid for?

The site is rich in gold deposits but it also has antimony, which was recently deemed a critical by the federal government. Antimony is used as a fire retardant and metal strengthener. It is used in everything from batteries, textiles, cell phones, plastics and cable sheathing. Right now, the U.S. doesn't have a domestic antimony mine. The Stibnite Gold Project could provide one-quarter of the American demand for antimony in the country. This is so important with the current tenuous trade relations in our country. As you may know, this area was originally designated a strategic mineral resource in World War II I sincerely believe that it cannot be in our national interest to be dependent on raw material elements from non-domestic sources, the pandemic should have taught us that.

I urge you to approve the project as outlined by Midas Gold in Alternative 2, it is the best of the alternatives outlined by the USFS. The Stibnite Gold Project will provide a huge benefit to our community and the local environment. The USFS has taken meaningful measures to ensure the public has had enough time and resources during the public comment period.

Thanks for your Consideration,

Name: Edward Coulter
