Hey Jennie:

I'm curious about your analysis of Air Quality issue related to this project. I've not seen an analysis of those in the documents.

There are many ways to address Air Quality resulting from slash/prescribed burns in the woods. I'd like to see the Panhandle NF take some proactive measures to prevent air quality degradation during this project. Look at using portable BioChar kilns, and technology like this at Nettenergy: [PyroFlash - Nettenergy](#).

PyroFlash - Nettenergy

Nettenergy's patented PyroFlash technology includes a new reactor design and an innovative separation process. I...

Composting woody material is also a great option.

I totally agree with the overall goals of the program, but lets do it right without impacting our most precious resource - Air.

Thanks!!

DBS
