Subject: Character Fire Salvage
Date: Monday, December 20, 2021 8:28:14 PM

Dear Mr.:

I enjoy recreating on public lands and I appreciate all that public lands has to offer me and others. I recognize the importance of the outdoors and connecting with nature. I believe there is therapeutic and health benefits to being outdoors and having those experiences. I also believe motorized recreation opportunities are an element of the public lands that agencies have not prioritized but need to. I appreciate the opportunity to provide feedback on the fire salvage and reforestation projects

I support timber salvage on the maximum amount of acres possible. This not only helps the health and future of the forest but as well as adds economic benefits to local communities.

Idaho benefits greatly from outdoor recreation. As outdoor recreation and motorized use continues to increase I believe the Forest Service should do everything possible in order to facilitate maximum amount of opportunities for users. I do not support any closures or decommissioning of routes for any reason including forest projects. These trails are important to users and provide opportunities for local economies to benefit. As recreation increases, the USFS should provide the maximum amount of mileage in order to reduce impact so that all users are not concentrated into small areas.

I support the proposed vegetation projects. The forest needs to be maintained in order to stay healthy and viable. If vegetation projects do not move forward this poses the greatest risk for wildfire. Wildfire is the greatest risk to all forest users, and it is a significant risk to wildlife and habitat. Please manage our forests so that we do not see the catastrophic results from wildfire. The Forest Service should be using non-fire techniques as often as possible such as mechanical thinning in order to prevent these events.

I believe as the USFS works to manage the land, rather than implementing closures this best fulfills President Biden's, "Executive Order On Advancing Racial Equity and Support for Underserved Communities Through the Federal Government." Management policies focused on "minimizing" the environmental impacts of motorized recreation have resulted in a dramatic decrease in motorized recreation opportunities on public lands over the last 20 years which has disproportionately impacted people with disabilities. It is time the Forest Service works to remove policies that discriminate against underserved populations - including those with disabilities.

Sincerely,

Orion Weihe
