Dear SNF - I have already written to you my comments on the SNF Travel Management Plan and would like to add the following. The conversion of the final leg of the Bear Basin Road (WR-26) from a pick-up truck road to an ATV road never made sense to me. I understand this 50-plus year old road is not constructed to FS standards, but closing the road to trucks and yet allowing an ever increasing number of ATVs will not solve any erosion problems. It would only change the type of motorized vehicle use of the road.

The closure of WR-26 would cause harm to the Bear Basin base camp outfitter and their operation. I am familiar to the importance of the existing road to the Bear Basin base camp and have visited the camp since the early 1970's. Please work with the base camp permittee in order to find an alternative travel management solution. Thank you.
Tory Taylor, Dubois.
