Good Evening:

The current proposal (WR-26) for changes to the Travel Management Plan include restricting travel on the last section of Bear Creek Road (FS-501) to "ATVs no wider than 65 inches" to decrease impact on wet areas. While well meaning, I think this restriction would be better to indicate seasons, i.e. spring, to reduce ruts and widening of the road as user skirt water holes. Continuing to allow larger vehicles, like pickups, on the road in dry seasons will decrease the amount of travel on the road by allowing recreationists to do one trip in hauling gear instead of several required in an ATV.

Thank you for your consideration,
Melissa Hemken
