Subject: Travel Management plan

I think that your proposed action on the travel management plan is too restrictive. It limits the width on some trails to 64". A Can Am Defender has a width of 66" and is a perfect vehicle for use in the forest. Additionally in the winter time, with the addition of tracks put on, it will have a width of approximately 72". These UTV's are perfect vehicles to go in and out of cabins and haul groceries, firewood etc.

Your Proposed Action Plan needs to include widths of at least 66" with tires on them and with the addition of tracks a width of up to 75".

I hope this change is considered for the benefit of the public. To go less than this is a disservice to the public.
